React   Redux

Node   npm

Git   MongoDB

Mongoose   SQL

Sequelize   MySQL

PostgreSQL   Sass

Bootstrap   AWS

Material-UI   JWT

Puppeteer   Moment

Webpack   Docker

GraphQL   Cheerio

COVER LETTER

Dear Hiring Manager,

I am interested in obtaining employment as an Associate Software Engineer at ProDIGIQ. I believe my dependable, personable, and professional nature makes me a competitive candidate for this position. I became a software engineer because I love code, and I believe my skills will help me succeed as a Associate Software Engineer.

Most recently I worked on three software projects while attending Hack Reactor: a front end capstone, a system design capstone, and a full stack final project. Each project required rigorous teamwork and collaboration while using real world, production grade practices and coding standards. Because I have prior experience working with JavaScript frameworks, I helped teach and guide each team I worked on. From forming an optimal toolchain, to managing git workflows, or simply providing words of encouragement, I was personally involved with each member while also providing my own technical contributions to the project.

I am confident my skills as a Associate Software Engineer will be valuable to ProDIGIQ, and I would like to further discuss my qualifications. Please feel free to contact me by email at blakelmason@gmail.com or by phone at (714) 878-5117.

Sincerely,

Blake Mason
